-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawase et al. in view of Japanese Patent 3-221423.

Kawase et al. disclose in Fig. 7 injection molding a plurality of plastic parts around a core 42 to be conventional. While the product is not formed using two movable cores butted together, Japanese Patent 3-221423 disclose in Figs. 10 and 12 movable cores 24,25 and 52,53 respectively buttably engaged together to make an injection molded part to be conventional. The cores allow for stability and ease of removal from the product.

It would have been obvious to use movable cores in the apparatus of Kawase et al. in order to allow for core stability and ease of removal from the product as suggested by Japanese Patent 3-221423. Providing a U-shape and ribs for the cores would have been obvious since such changes in shape still allow butting of the surfaces and thus engagement of the surfaces. See In re Dailey et al, 149 USPQ 47.
